Nevada Revised Statutes 392.425

Authorization for pupil to self-administer medication for asthma and anaphylaxis requires principals and school nurses to allow students to self-administer prescribed medications for asthma and anaphylaxis (severe systemic allergic reaction) under certain circumstances. NRS 392.425 was designed with rapid response and student safety in mind.

If a student carries medication for self-treatment of either of these conditions, he/she may continue to do so under the following guidelines:

- The parent/guardian has requested that the student carry the medication.
- The physician, physician assistant or advanced practice registered nurse has provided a signed statement indicating the student has asthma or anaphylaxis and is capable of self-administration of the medication.
- The parent/guardian acknowledges that no additional District duties are created and that immunity from liability for injury to the student as a result of selfadministration of the medication is granted to the District.

The form Request to Authorize Student Self-Administration of Prescribed Medication for Asthma/Anaphylaxis, HS-96 needs to be completed by the parent/guardian (top section) and the physician (middle section). The school nurse will complete the lower section and provide a copy to the parent.

For students who misuse their medication (e.g. allowing other students to use) or who appear unable to safely self-administer it, the medication will be maintained in the health office or maintained in a secure location by a school staff member during the student's class or other school activities.
